SUMMARY

Seven years in financial operations at PIMCO and LPL Financial across \$3T+ AUM environments. The majority of that work has involved building net-new infrastructure and owning initiatives that fell outside any existing team's scope. In the past year that includes PIMCO's first enterprise BI reporting platform, a proprietary Bank Loan Amendment system currently in development, an AI classification bot running at 98% accuracy, and a firm-wide knowledge infrastructure built for AI integration. The pattern is the same across all of it: an undefined problem, competing stakeholders, a tight timeline, and a working solution at the end.

CORE COMPETENCIES

Operational Problem Solving: Ambiguous problem structuring | First principles analysis | Cross-functional translation | Framework development | Process gap identification | Root cause analysis

Data Capture & Analytics: Power BI platform architecture | Semantic layer design | SQL | DAX | KPI development | Forecasting models | SSRS migration | AI classification systems | VBA automation

Project Execution: End-to-end project ownership | Jira (Agile, sprints, stories, Gantt) | Decision logs | Risk mitigation | Vendor management | Stakeholder wrangling | Audit-ready documentation

Stakeholder Navigation: Portfolio Managers | Executive leadership | Legal and compliance | IT and data warehouse teams | External vendors | ESG and adjacent ops groups

PROFESSIONAL EXPERIENCE

PIMCO | Newport Beach, CA

11/24 - Present

Senior Associate | Internal Strategy & Operations | 10/24 - Present

Data Capture, Analytics Infrastructure, and Process Improvement

- Built an enterprise reporting infrastructure for Investment Operations. Initial launch via a six-module Power BI platform tracking 1,600+ amendment records, \$1.6B+ in active daily positions, and 360+ class action cases. Coordinated the semantic layer with the data warehouse team, wrote the data dictionary and lookup standardization logic, and got the platform to production with monthly newsletters keeping senior stakeholders updated on relevant KPIs.
- Built an AI-assisted classification bot that preemptively detects 98% of discrepancies before they become operational errors. Identified the problem, scoped the solution, built it, and deployed it. Reduced audit review time and operational risk across the amendment workflow without being asked to.
- Designed and deployed VBA automations delivering 20%+ time savings across operational workflows, then built the business case and ran the teach-in sessions that got the firm to actually use them. The automation was the easy part. Getting adoption without formal authority was the real problem.
- Built PIMCO's Corporate Actions knowledge hub in SharePoint, migrating all three workflow libraries into a centralized platform structured for Copilot and AI integration, including a 20+ procedure training repository and cross-departmental data response library that eliminated reliance on tribal knowledge for onboarding and compliance inquiries.
- Own the weekly metrics cadence across five simultaneous workflows. Weekly check-ins with team defining pipeline status, SLA performance, financial risk thresholds, and deadline exposure, then flagging escalations to leadership before it becomes a fire. Not a monthly report. A weekly checkpoint that catches problems early.

Executing Special Projects

- Led the proprietary Bank Loan Amendment platform buildout from scratch: assessed vendor capabilities, negotiated API scope with external vendors (FIS and Octus), authored the budget proposal for senior leadership, set up the decision log and Jira-based Gantt roadmap, managed Agile sprint cycles with the IT team, and have been accountable for Q4 2026 production delivery.
- Co-led the build and launch of PIMCO's centralized KPI data repository using Power BI within Investment Operations firmwide. Built the structured implementation playbook that became the firm-wide standard other departments now follow. The build required close coordination across IT, the data warehouse team, and senior stakeholders, and went live during the highest-volume Bank Loan processing week of the year without error.
- During proxy season, Proximity ballot rejections started surfacing across custodians with no clear owner and no resolution process in place. Partnered with State Street, ISS, and internal stakeholders to diagnose the root cause, built a recurring monitoring process from scratch, and established the escalation framework the team now uses to prevent it from recurring.
- Took on Class Action litigation risk with no formal mandate: built the intake process, defined eligibility determination criteria, established filing deadline governance across a 360+ case portfolio, and created the legal coordination framework. Streamlined process with clear ownership defined across performance operations and global bank oversight teams.
- Ran 35+ initiatives across three workflows in H1 2026. Most landed on the desk because they did not fit cleanly into anyone else's role. That is where the interesting work tends to be.

Working at the Intersection of Competing Priorities

- Day-to-day coordination at PIMCO spans Portfolio Managers, senior leadership, Legal, IT, and external vendors simultaneously; groups with different priorities, different vocabularies, and different definitions of success. Built working relationships across all of

them by showing up consistently, communicating in terms each group responds to, and keeping everyone aligned to the same goal across long-running, multi-phase initiatives.

- Running cross-functional coordination on the Bank Loan platform meant leading recurring alignment meetings across senior leadership, executive stakeholders, IT, and external vendors simultaneously. Every session had a different set of priorities in the room. Got the group to shared decisions on UI design, field implementation, automated communications, and workflow logic by keeping every conversation grounded in what the business actually needed.
- Selected to represent Corporate Actions in PIMCO's Trade Floor Operations Digitization Group, a cross-departmental initiative launched in 2026 to share knowledge, align on technology solutions, and solve problems in parallel rather than duplicating efforts across teams. Led meetings for the group, surfacing Corporate Actions use cases and coordinating knowledge-sharing sessions to help other departments avoid rework and move faster.
- Serve as lead peer mentor for PIMCO's summer intern cohort, acting as a neutral resource for interns navigating company culture, building cross-departmental relationships, and understanding how the firm actually operates. Selected by leadership to sit outside the formal management chain so interns have an honest place to go.

LPL Financial | San Diego, CA

02/19 - 11/24

Analyst | 10/23-10/24 **Associate Analyst** | 10/21-10/23 **Sr. Operations Specialist** | 10/20-10/21 **Corporate Actions Specialist** | 02/19-10/20

- Led a major system migration with no established playbook: wrote requirements documentation, built test scripts, ran back-testing, and onboarded teams to new processing platforms. Zero operational disruption during cutover.
- Built VBA automations for corporate actions and bond allocation workflows delivering 200%+ time savings. Identified the problem, built the solution, drove adoption.
- Cleared 90%+ of financial reconciliation discrepancies within SLA across DTC, foreign depositories, brokers, and internal teams, including FX mismatches, settlement breaks, failed allocations, and delayed distributions.

EDUCATION & CERTIFICATIONS

University of Nevada, Las Vegas | BSBA in Economics | GPA: 3.75 | Dean's List (2016-2018)

Certifications: Securities Industries Essentials (SIE) | Google Data Analytics Certificate (2023) | CFA Level I (In Progress, 2026)
